

nanobébé

nanobébé's Smart Warming Bowl is the optimal warming product for breastmilk. Thanks to its unique geometry, it warms nanobébé bottles and breastmilk bags quickly and evenly, so precious nutrients aren't destroyed by overheating. Simply place the bottle or bag on the bowl's curved bottom, fill with warm water, and voilà, your breastmilk will reach the appropriate feeding temperature promptly. No electricity, no settings and zero fuss.

- Adheres to medical guidelines: breastmilk should be warmed in a bowl of warm water to prevent overheating
- For quick and even warming at home & on the go
- Optimal warming system for breastmilk
- Even warming of nanobébé bottles and breastmilk storage bags
- BPA and Phthalate free

How to use your Smart Warming Bowl

OPTIMAL FOR
BREAST
MILK

HOW TO USE YOUR SMART WARMING BOWL

1

Place the bottle, with the nipple/teat on, upon the dome at the base of the bowl to prevent any air pockets.

2

Fill the bowl with warm tap water.

3

Remove from water, check temperature, if further warming is needed return to step 1 and repeat the process, then enjoy feeding your baby!

WARNING!

NEVER use boiling water

Warm bottle in warm tap water with nipple/teat **ONLY**

NEVER use travel & storage cap while warming

Water level should not reach the nipple/teat ring

Bottle will naturally float upwards as the breastmilk begins to be surrounded by water and the warming process begins.

Note: Carefully remove the bottle from the warmer and check the temperature of the milk by letting a few drops fall on your skin, the inside of your wrist for example. The milk should be approximately at body temperature. If the milk has not reached body temperature, return to step 1 and repeat the process. Never use boiling water. Warm bottle in tap water with nipple/teat **ONLY**. Never use travel & storage cap while warming.

USING THE BOWL TO DEFROST BREASTMILK BAGS

1. Ensure the storage bag you are about to defrost is tightly sealed by running your finger along the double zipper.
2. Place the storage bag inside the warmer with the zipper facing up.
3. Fill the warmer with lukewarm tap water.
4. Remove the bag from the warmer when the frozen breastmilk has completely thawed. (The time it takes depends on the temperature of both the milk and the water).
5. If feeding immediately, transfer the milk to a nanobébé bottle and warm the bottle to body temperature. Thawed breastmilk can be stored in the fridge for up to 24 hours. Do not refreeze.

Before using your Smart Warming Bowl, please ensure that you read these instructions carefully. Please save these instructions for future reference. This product is designed for use with nanobébé bottles and breastmilk storage bags.

WARNING!

Failure to follow instructions may cause scalding

- Always place the bottle or bag in the warming bowl before filling the bowl with water.
- To preserve nutrients, never fill the bowl with boiling water.
- Never heat the bowl in a microwave, in an oven or on a stovetop.
- Before filling the bowl with water, ensure that it is placed on a flat surface such as a kitchen counter.
- Always check the temperature of milk before giving your baby a bottle, by letting a few drops fall on your skin.
- The amount of time it takes cold milk to reach body temperature varies with the quantity of milk and the temperature of the water in the bowl.
